

MODEL 4057

(Main Frame Part No. MF-405)

TRIPLE OR QUADRUPLE

This Model 4057 is designed for factories or warehouses. It can be used for high stacking, shipping or receiving. The low over-all height makes it possible to load or unload cartons stacked to within 1" of the top, in railcars or highway trailers.

It can be converted to triple or quadruple by adding "Snap On Top Extensions" and "Sliding Drop Plate Extensions" to the main frame.

This conversion makes the 4057 extremely versatile and one of the most popular units.

The lifting blades in the illustration at the right are positioned to handle "three wide" in the high position and "four wide" in the lower position.

Mounting to fit your fork truck attached to this side.

Folding Forks Are Not Available With This Model
